EMP Survival 50+ Tips on How To Survive The Electromagnetic Pulse And Save Your Electronic Devices  
You cannot see, hear or feel an Electromagnetic Pulse coming. You may not be able to rely on an advanced warning from the Government or authorities. And yet it could prove deadly to every electronic device you own. As more and more of our lives — entertainment, medical intervention and life support systems, employment, photographs, music, communication and more — comes to rely on electrical devices, the more devastating the risk from such an event becomes. Fortunately, there are steps you can take to make sure that you have protected your possessions and prepared for this worst-case scenario. This guide will take you through simple preparations you can make, including: Building a Faraday cage Utilising existing ‘safe areas’ in your home Installing surge protectors Disaster planning Establishing a communication network in a world without phones Remember that, whether natural or as a result of terrorist actions, it is highly unlikely you would be given any advanced warning of an EMP strike AT ALL — the surge moves at the speed of light and so the first you would know about it would be when it struck. All preparations must be made in advance.
